

Large scale monitoring species distribution patterns across the western Atlantic ocean

Genevieve Davis¹, Danielle Cholewiak¹, Sofie Van Parijs¹, Mark Baumgartner², and many others

¹Northeast Fisheries Science Center

²Woods Hole Oceanographic Institute

The power of passive acoustics

Long term trends in:

- All acoustically active species
- Movement Patterns
- Timing
- Distance from shore
- Soundscape & ambient noise

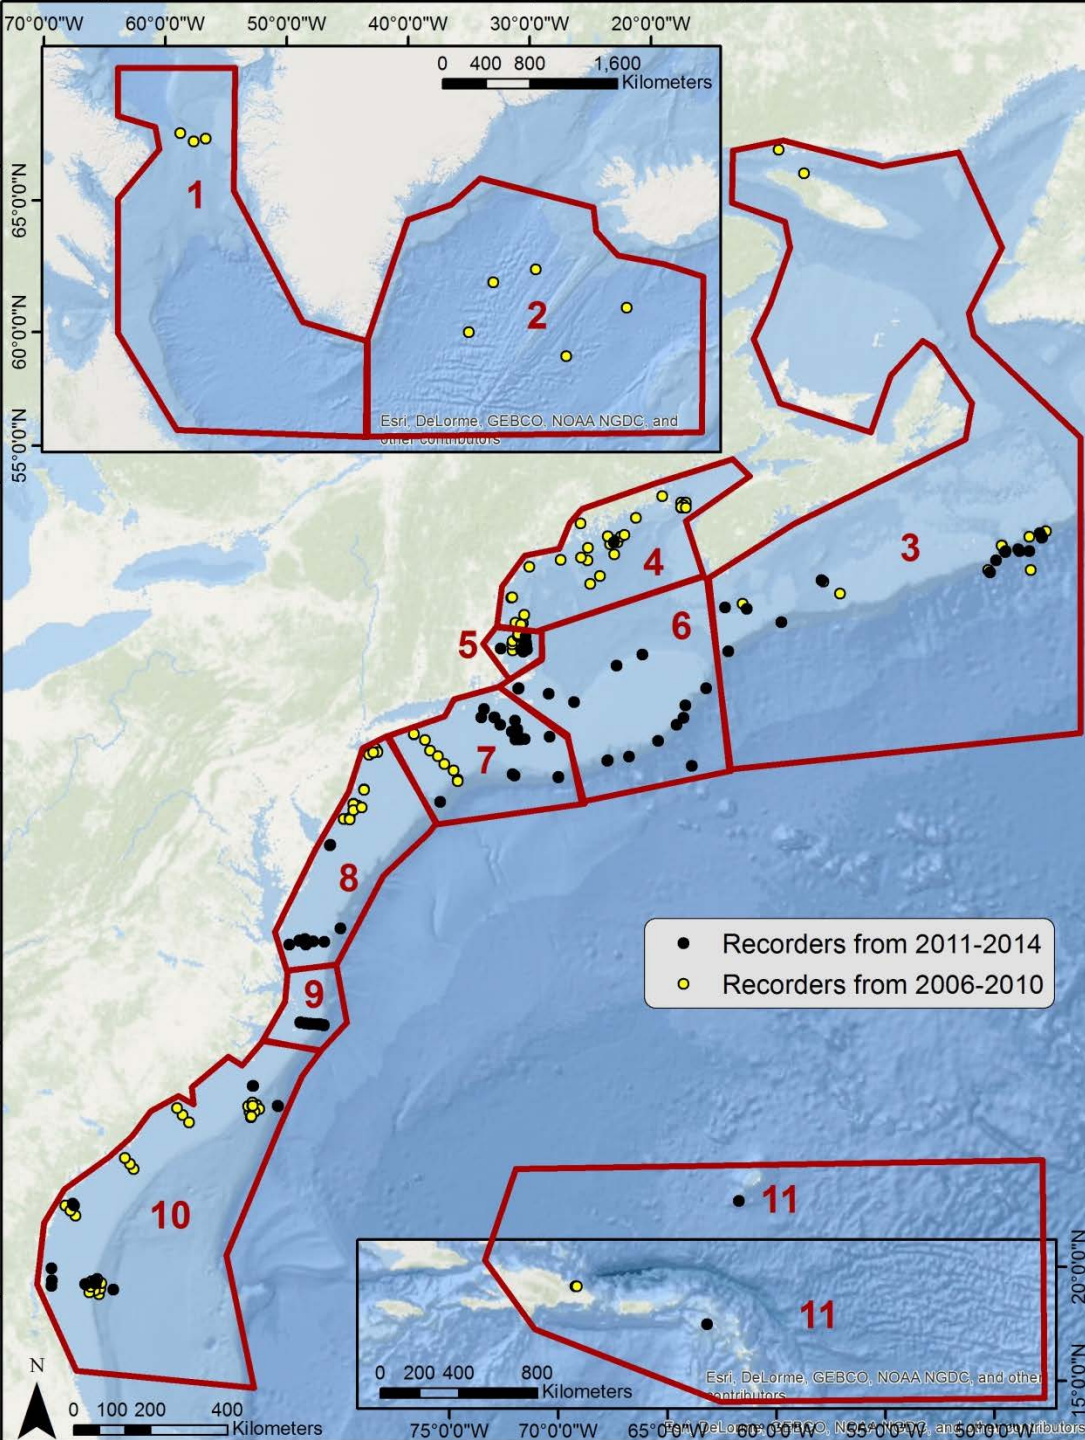

Esri, DeLorme, GEBCO, NOAA NGDC, and other contributors

Oregon State University

LFDCS: Low-frequency detection and classification system

- Creates a spectrogram
- Detects sounds and pitch tracks
- Classifies pitch tracks based on call library
- NARW, fin, humpback, sei and blue

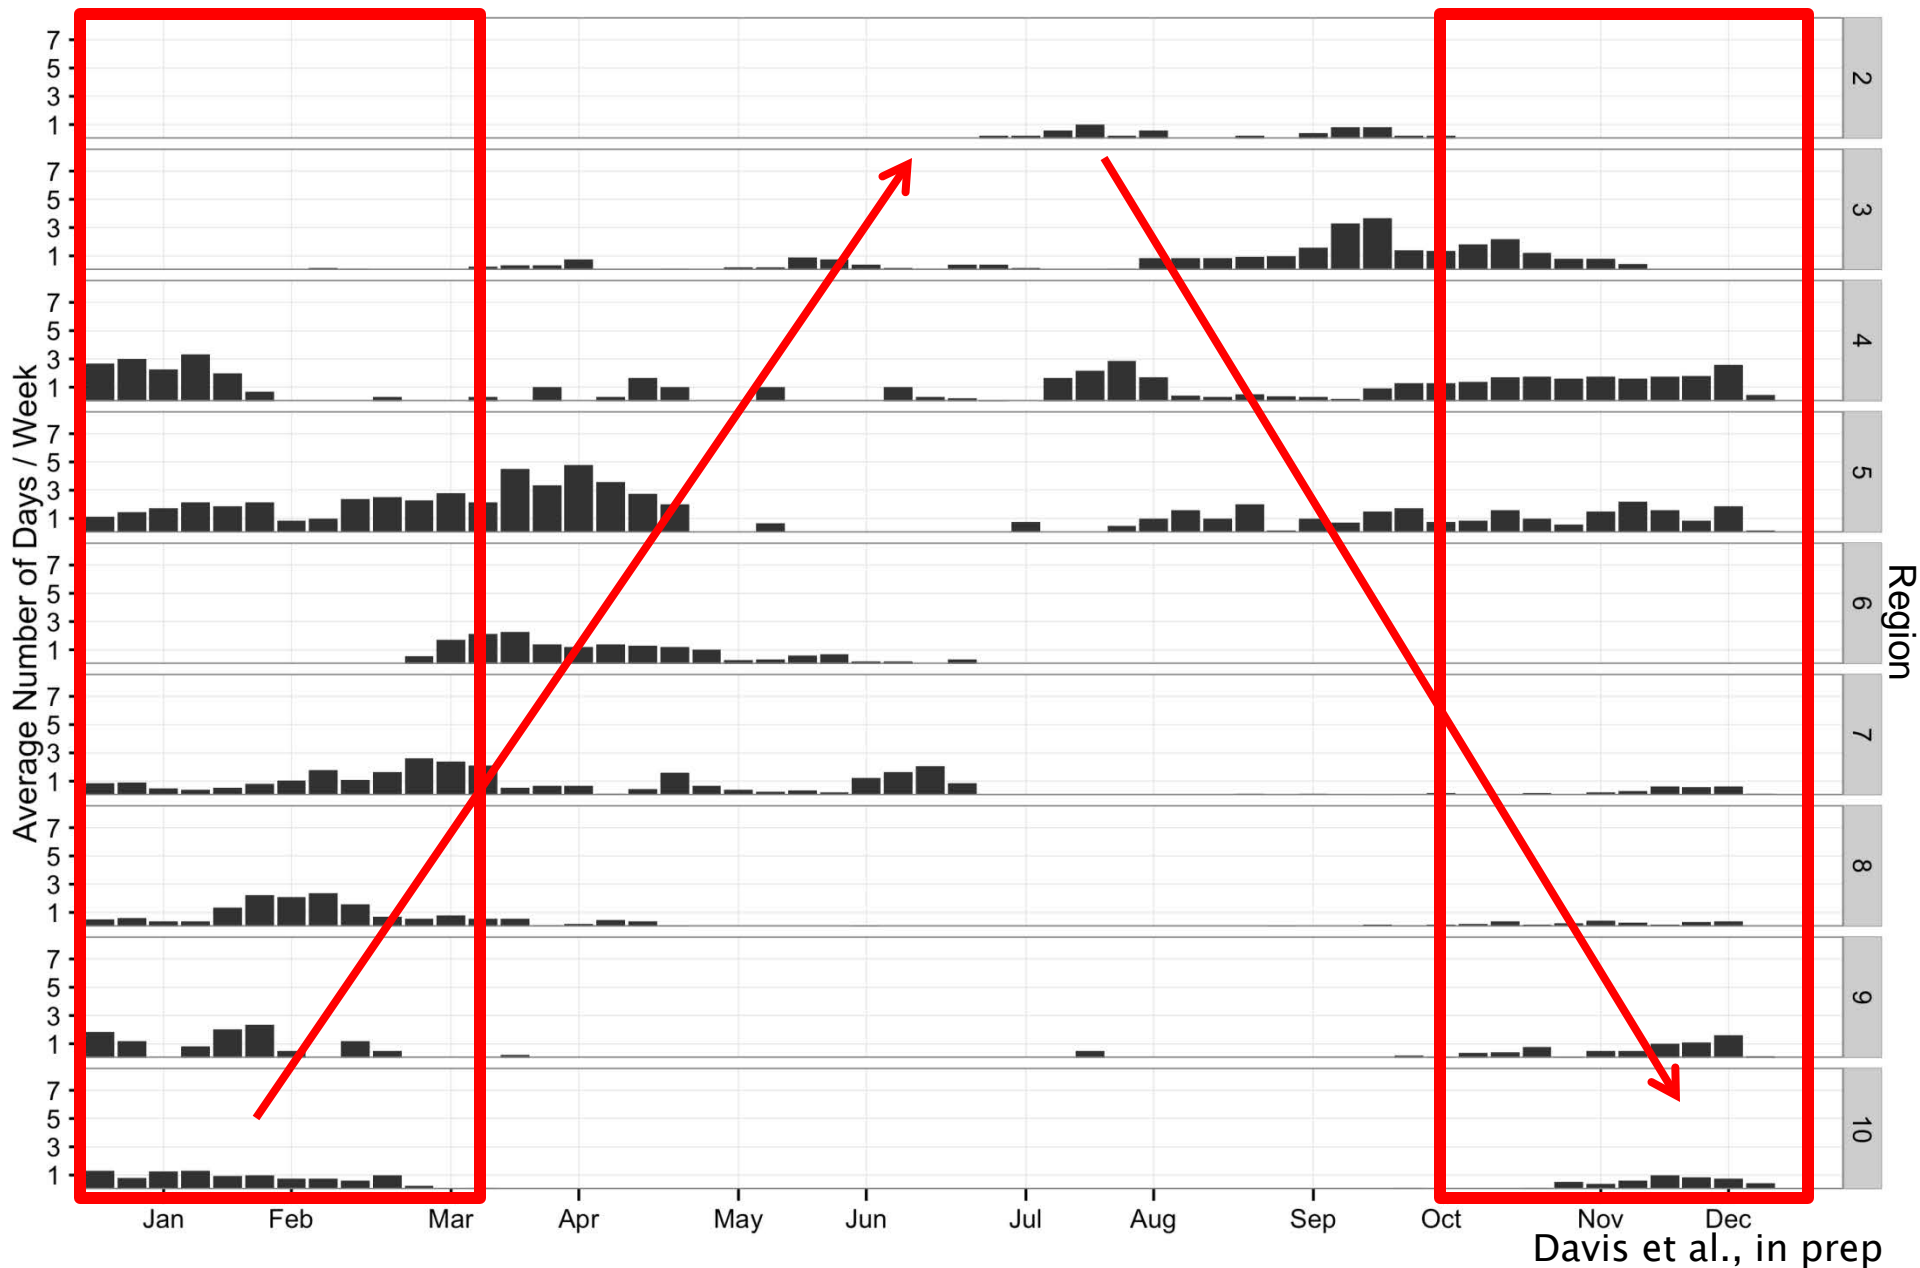

NARW results

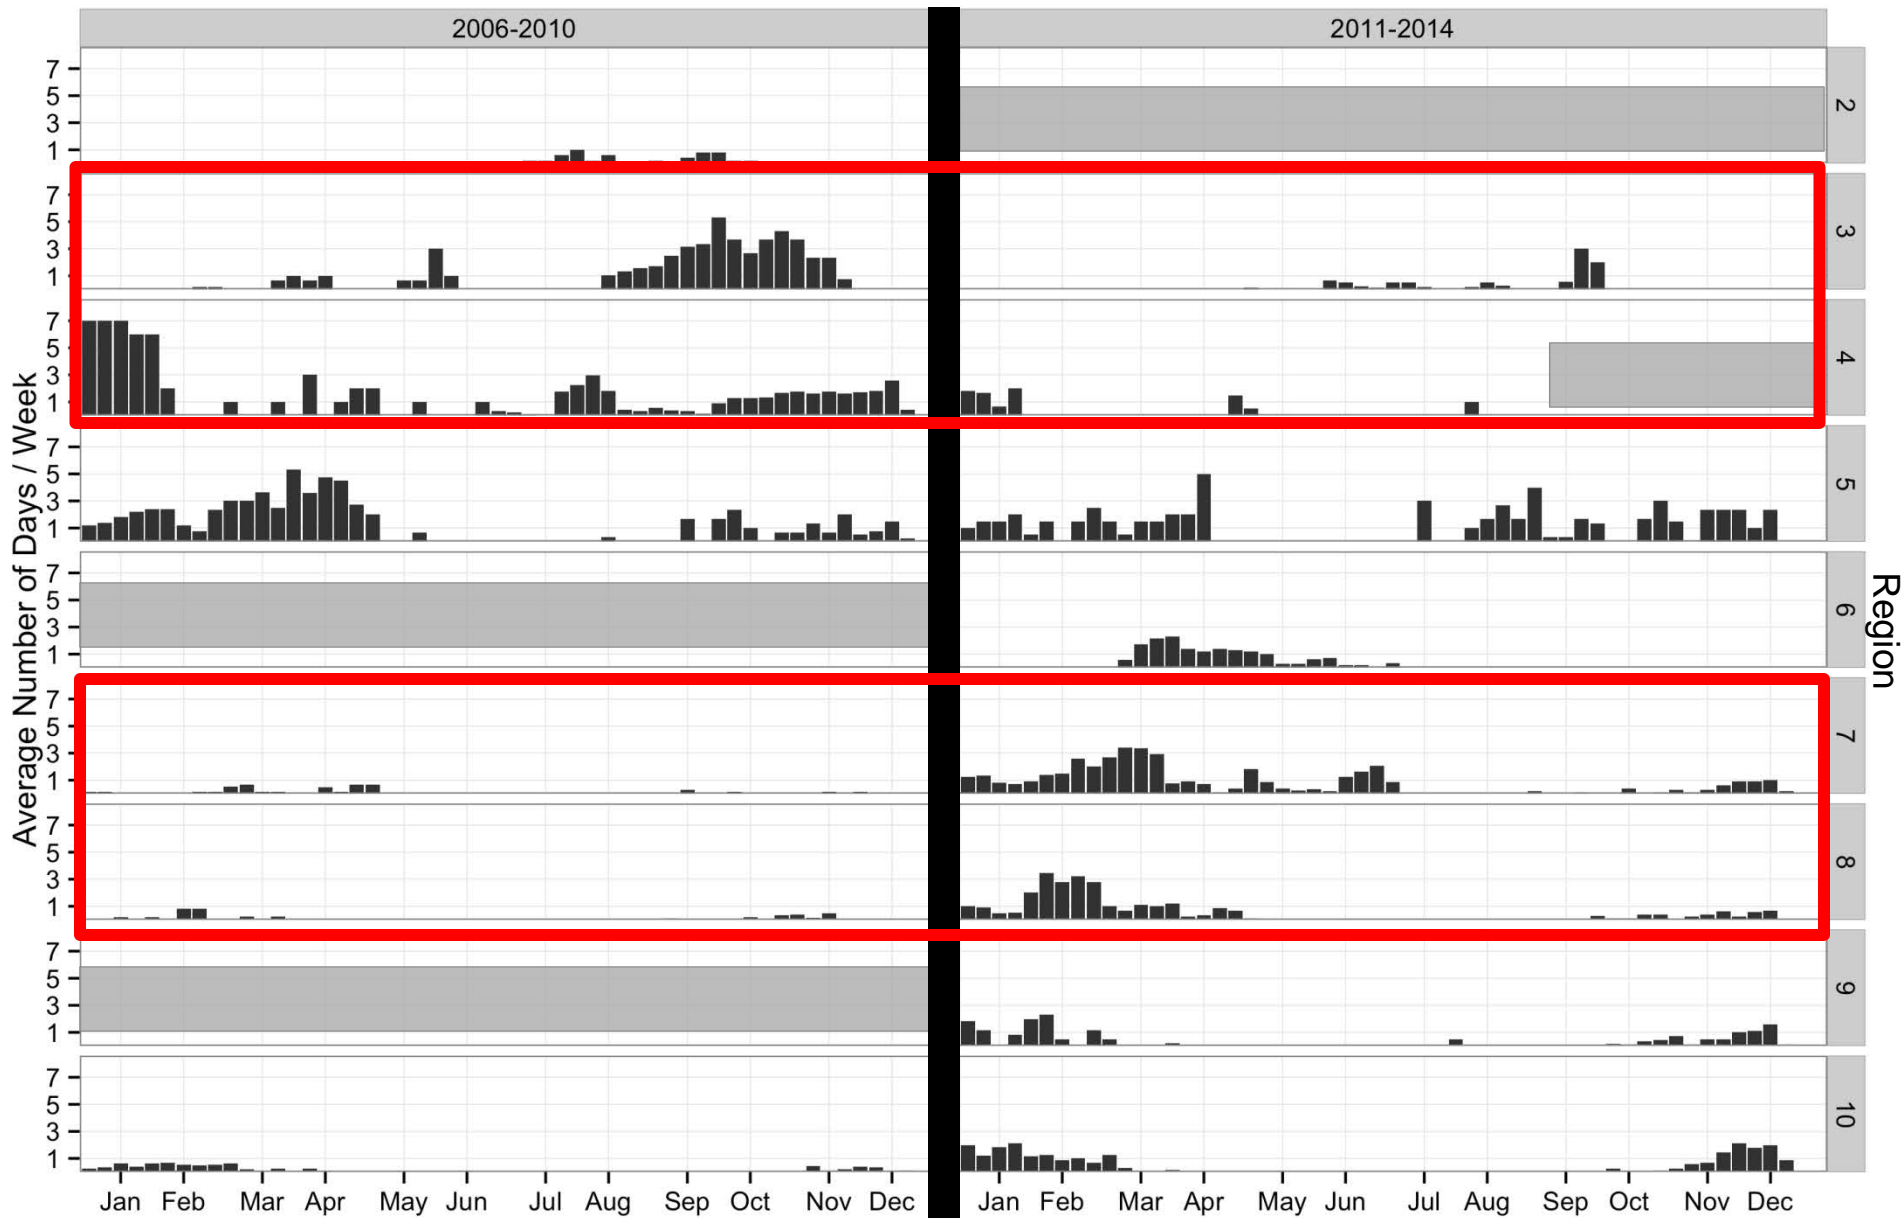

- **325** recorders manually reviewed
- **~40,000** days analyzed:
 - Of these, **2,495** days have right whale presence

Daily Presence Results: 2006–2014

Daily Presence: comparison over time

Distance to Shore Breakdown

Current Acoustic Deployments: 2015 - 2018

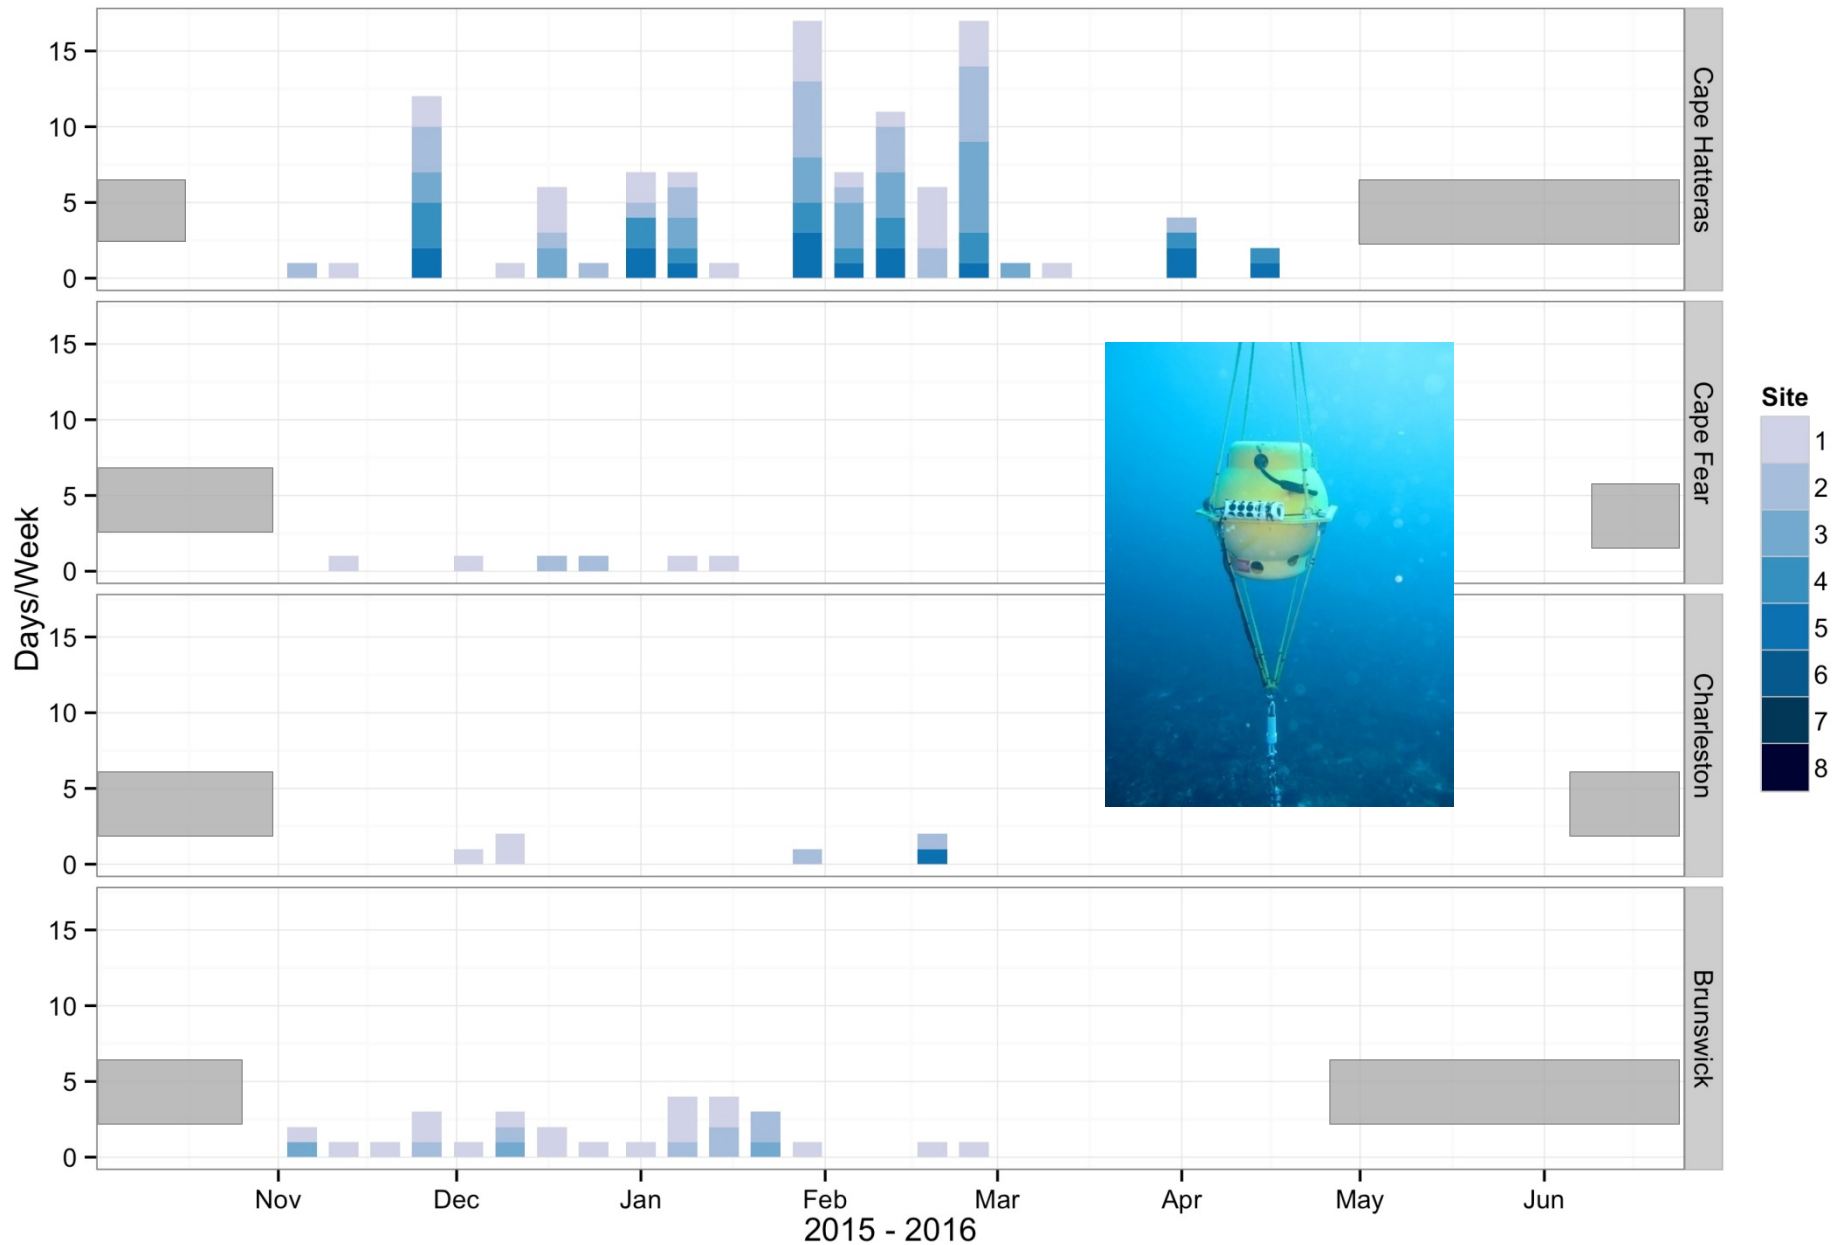

- NEFSC/SEFSC MARUs (2015 - 2018)
- ▲ NEFSC/SEFSC HARPs (2015 - 2019)
- ★ Noise Reference Stations (2014 - Ongoing)
- ▲ DUKE HARPs

0 100 200 400 Nautical Miles

0 200 400 800 Kilometers

MARU lines with NARW by Deployment & Site

CHAMP Goals: The basic aim of CHAMP is to collaborate with managers, researchers, NGO's, sanctuaries, government officials, and others in the Caribbean to gain a better understanding of the humpback whales that migrate to the area and help establish a robust monitoring program for whales in this region.

Project Investigators: Peter Corkeron, Sofie Van Parijs, Fred Wenzel

Project Coordinator: Heather Heenehan

Field Team: Leah Crowe, Genevieve Davis, Heather Heenehan, Joy Stanistreet

Funded by NOAA with in-kind support from many generous collaborators

2 Field Teams

6 Islands: DR, Aruba, Bonaire, St. Martin, Guadeloupe, Martinique

7 Sites

3 SoundTraps

6 MARU's

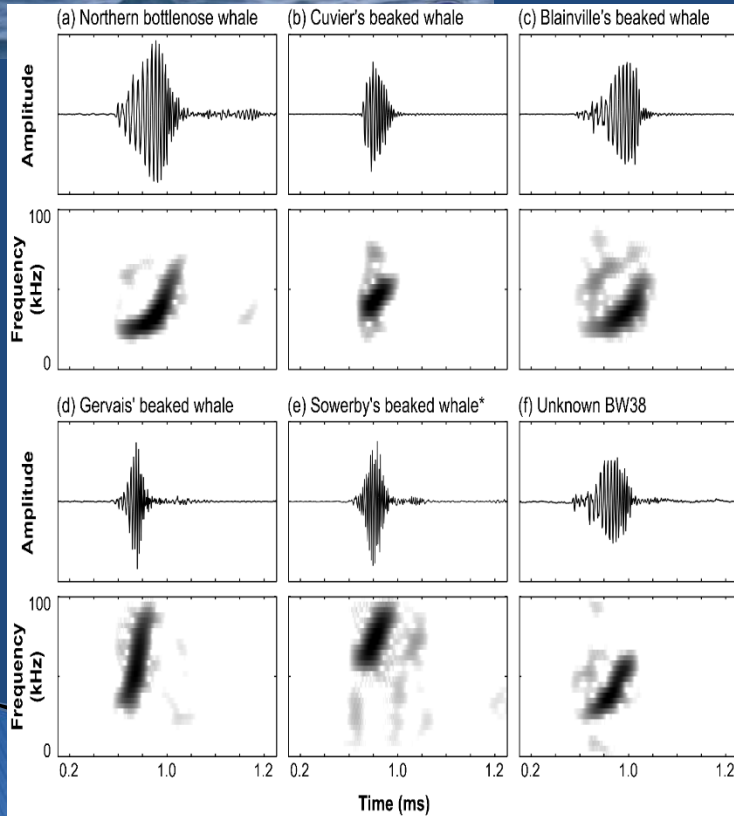

Acoustic Ecology, Abundance, Soundscapes and Ocean Noise

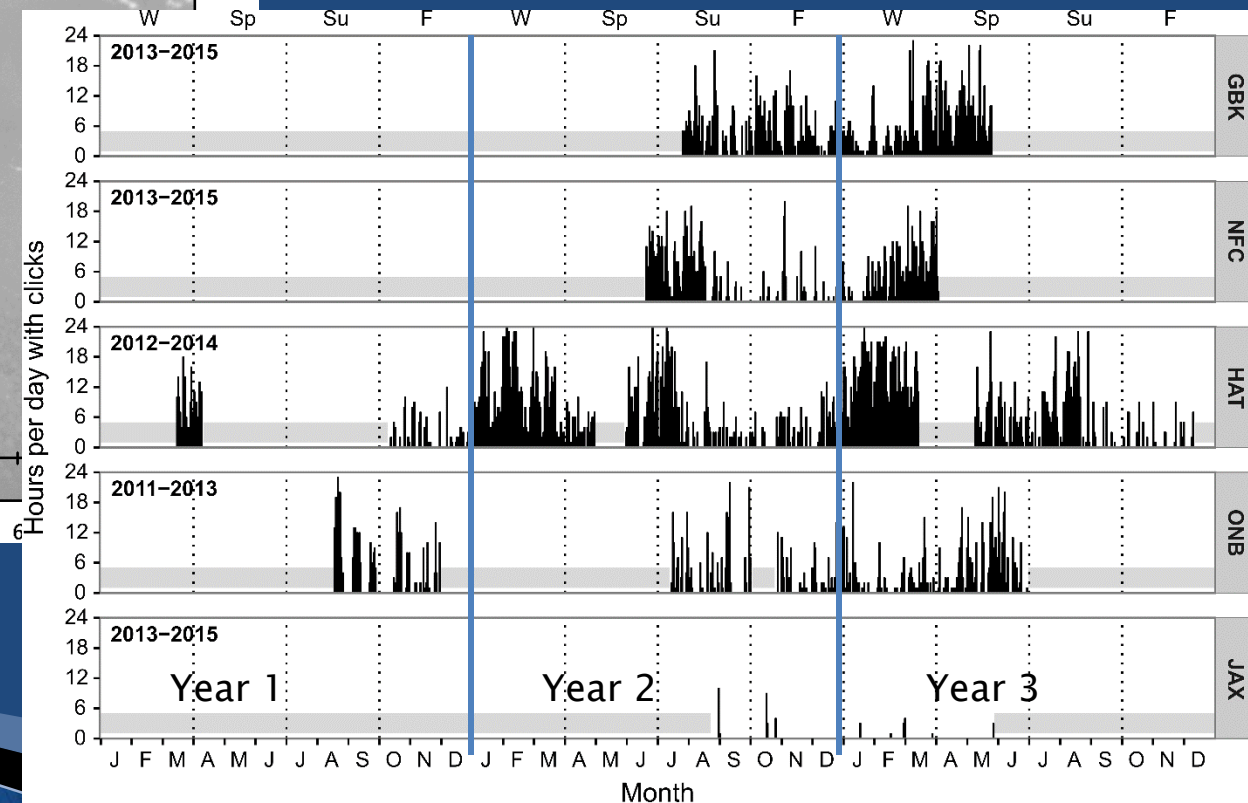

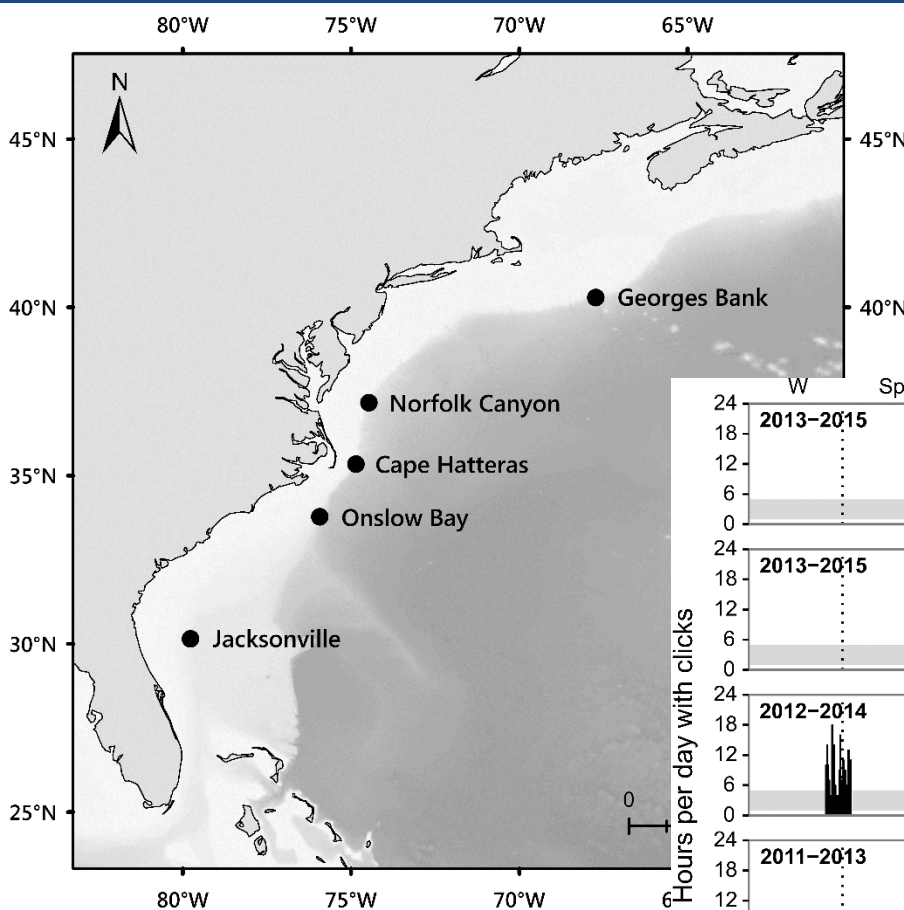

High-frequency species

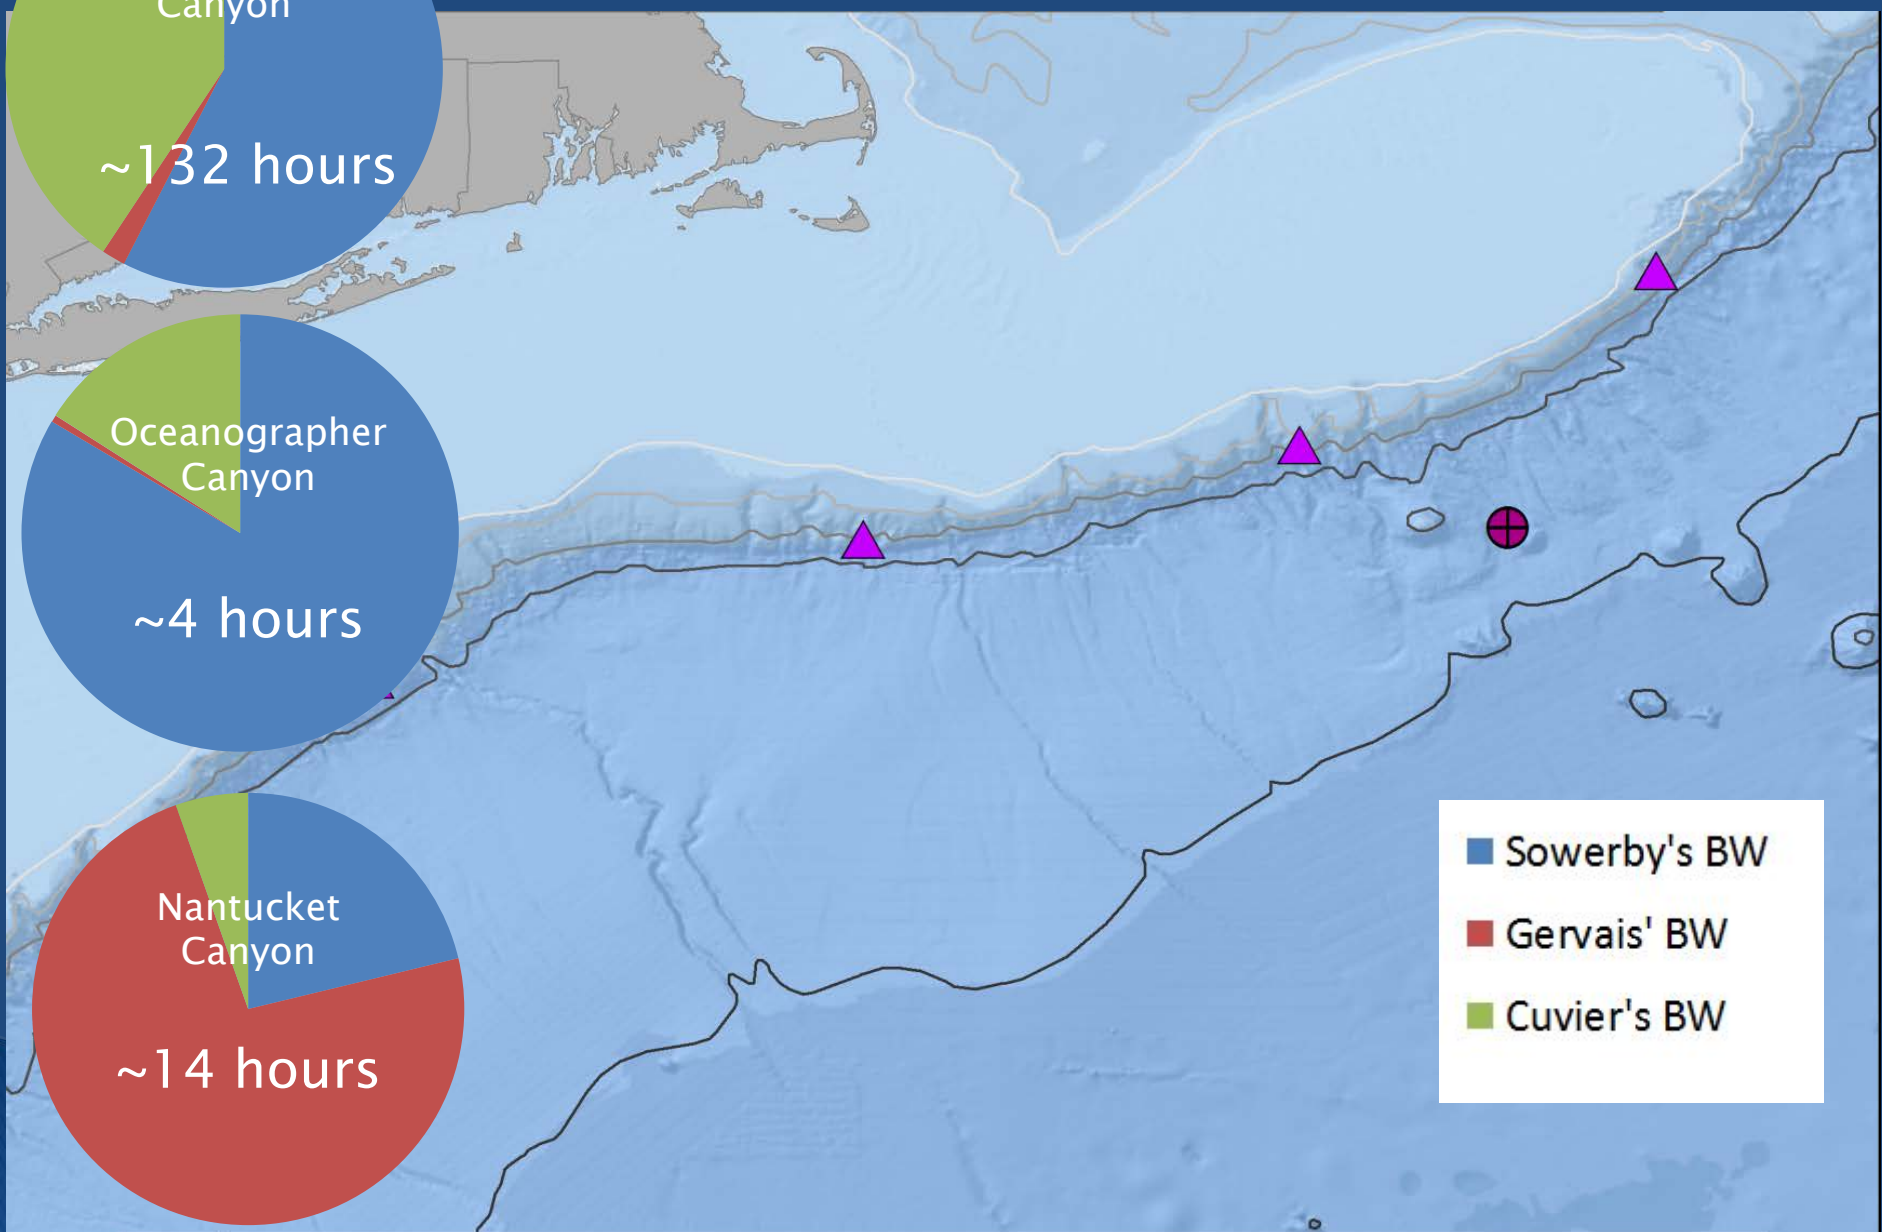

Sperm whales: 2011 – 2015

What did you say?

Modeling the vessel noise on the communication space of baleen whales

Cholewiak et al., in review

Baleen whales have lost > 80% communication space for many call types/songs

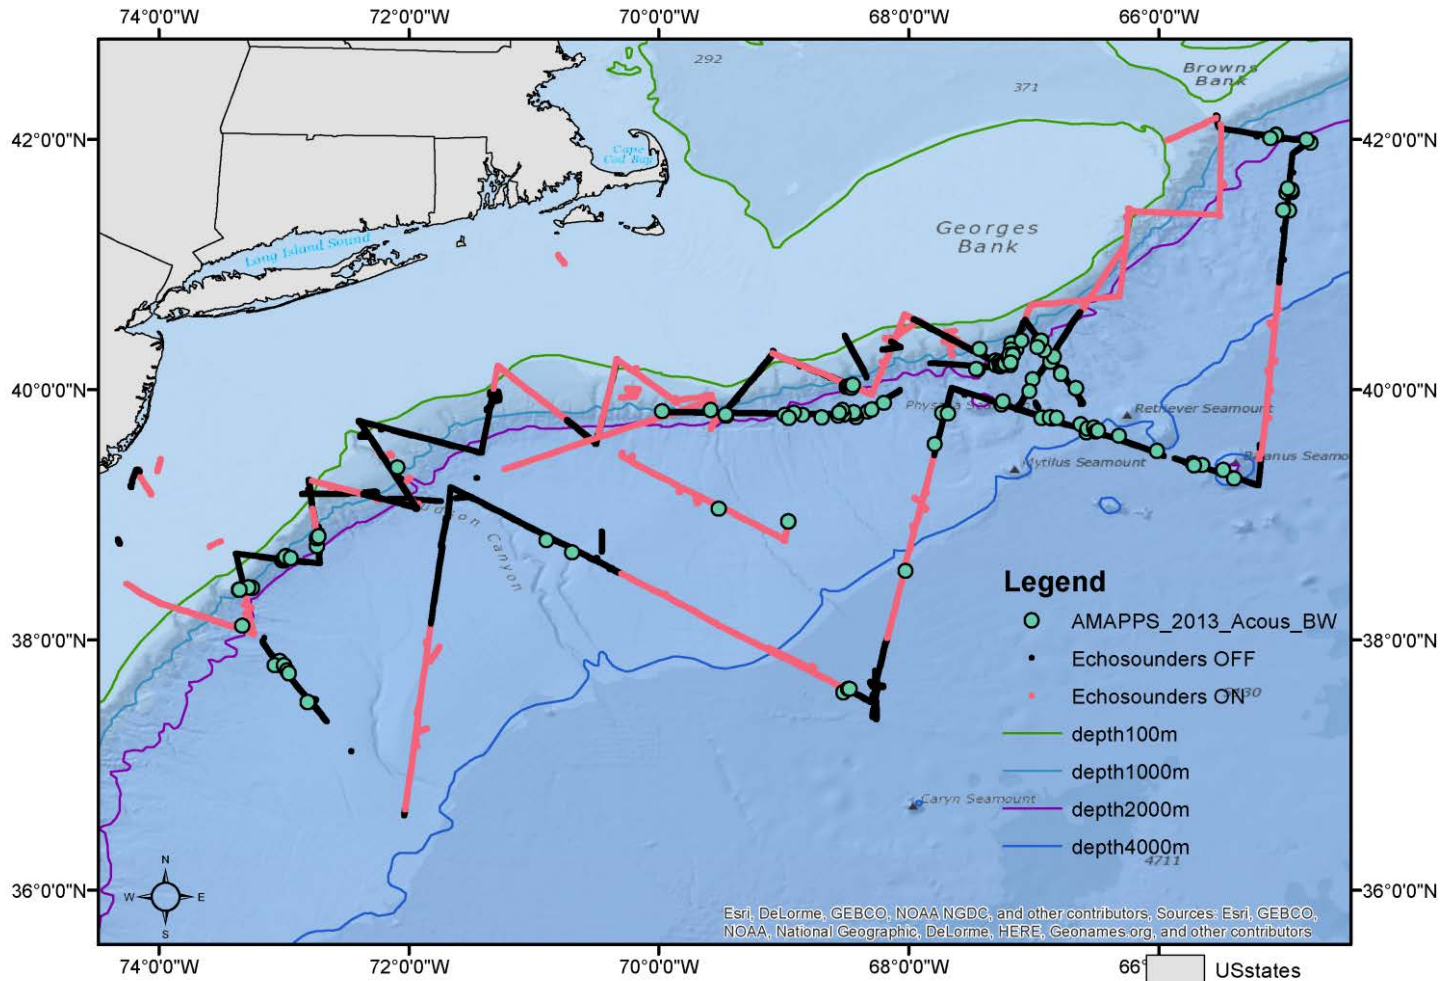

Cholewiak et al., in review

Vessel noise isn't the only issue...

...Sensitive species respond to shipboard echosounders as well

Cholewiak et al., in prep

NOAA Ocean Noise Strategy:

Building a 10 year Vision for Managing Anthropogenic Noise

NOAA is the lead US agency responsible for reducing the impacts of noise on marine species

- Marine Mammal Protection Act
- Endangered Species Act
- National Marine Sanctuaries Act
- National Environmental Policy Act

NOAA Fisheries Office of Protected Resources
NOAA Fisheries Office of Science and Technology
NOS Office of National Marine Sanctuaries

Leila Hatch, leila.hatch@noaa.gov
Jason Gedamke, jason.gedamke@noaa.gov
Jolie Harrison, jolie.harrison@noaa.gov

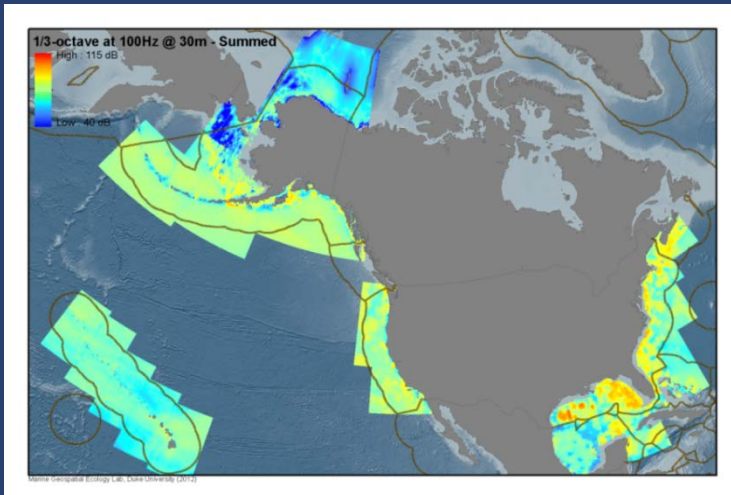

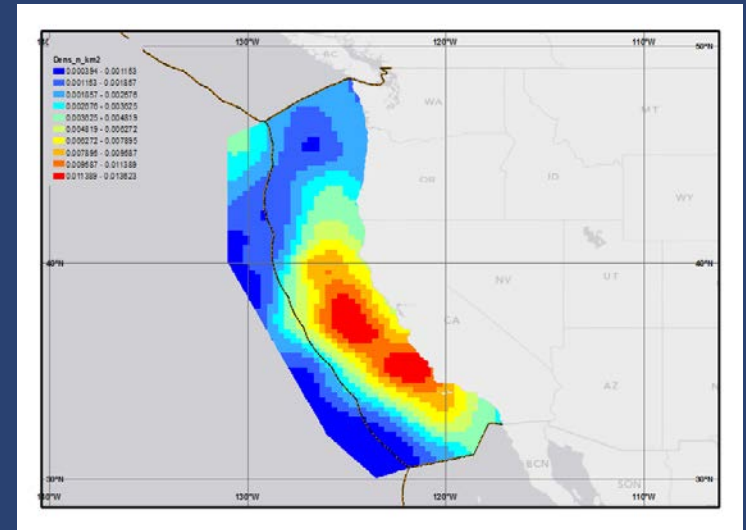

Ocean Noise Strategy 10 Year Vision

Website: cetsound.noaa.gov

Science. NOAA and federal partners are filling shared critical knowledge gaps and building understanding of noise impacts over ecologically-relevant scales.

Management. NOAA's actions are integrated across the agency and minimizing the acute, chronic, and cumulative effects of noise on marine species and their habitat.

Decision Support Tools. NOAA is developing publically available tools for assessment, planning and mitigation of noise-making activities over ecologically-relevant scales.

Outreach. NOAA is educating the public on noise impacts, engaging with stakeholders and coordinating with related efforts internationally.

NOAA Ocean Noise Reference Station: Ongoing work: 2015–2017

- Collaborative project amongst all Science Centers & NPS
- Monitoring ambient noise across U.S. waters

NCEI: Passive Acoustic Data Archive and Accessibility

Layers

Passive Acoustic Data

Passive acoustic data are used by NOAA and other agencies and institutions for a wide range of activities including monitoring living marine resources, monitoring of earthquake and geological activity, and assessing impacts of anthropogenic noise on marine life.

Information on the archive is available on the [NCEI Passive Acoustic Data Archive](#) page.

Map controls: Identify, Basemap, Options

Map style: Mercator, Arctic, Antarctic

Map features: Vertical scale bar, Position: -112.529°, 48.069°, Elevation: [blank]

Map labels: Pacific Ocean, North Atlantic, United States, Mexico, Chicago, New York, Los Angeles, Mexico City, Gulf of Mexico, Mexico Basin, Hatteras Plain, North America Basin, Sohm Plain

Map data values: 8238, 9621, 5529, 6022, 8201, 8501

Biannual Work Plan: Integrating and Tracking Contributions by Participating Programs Across the Agency

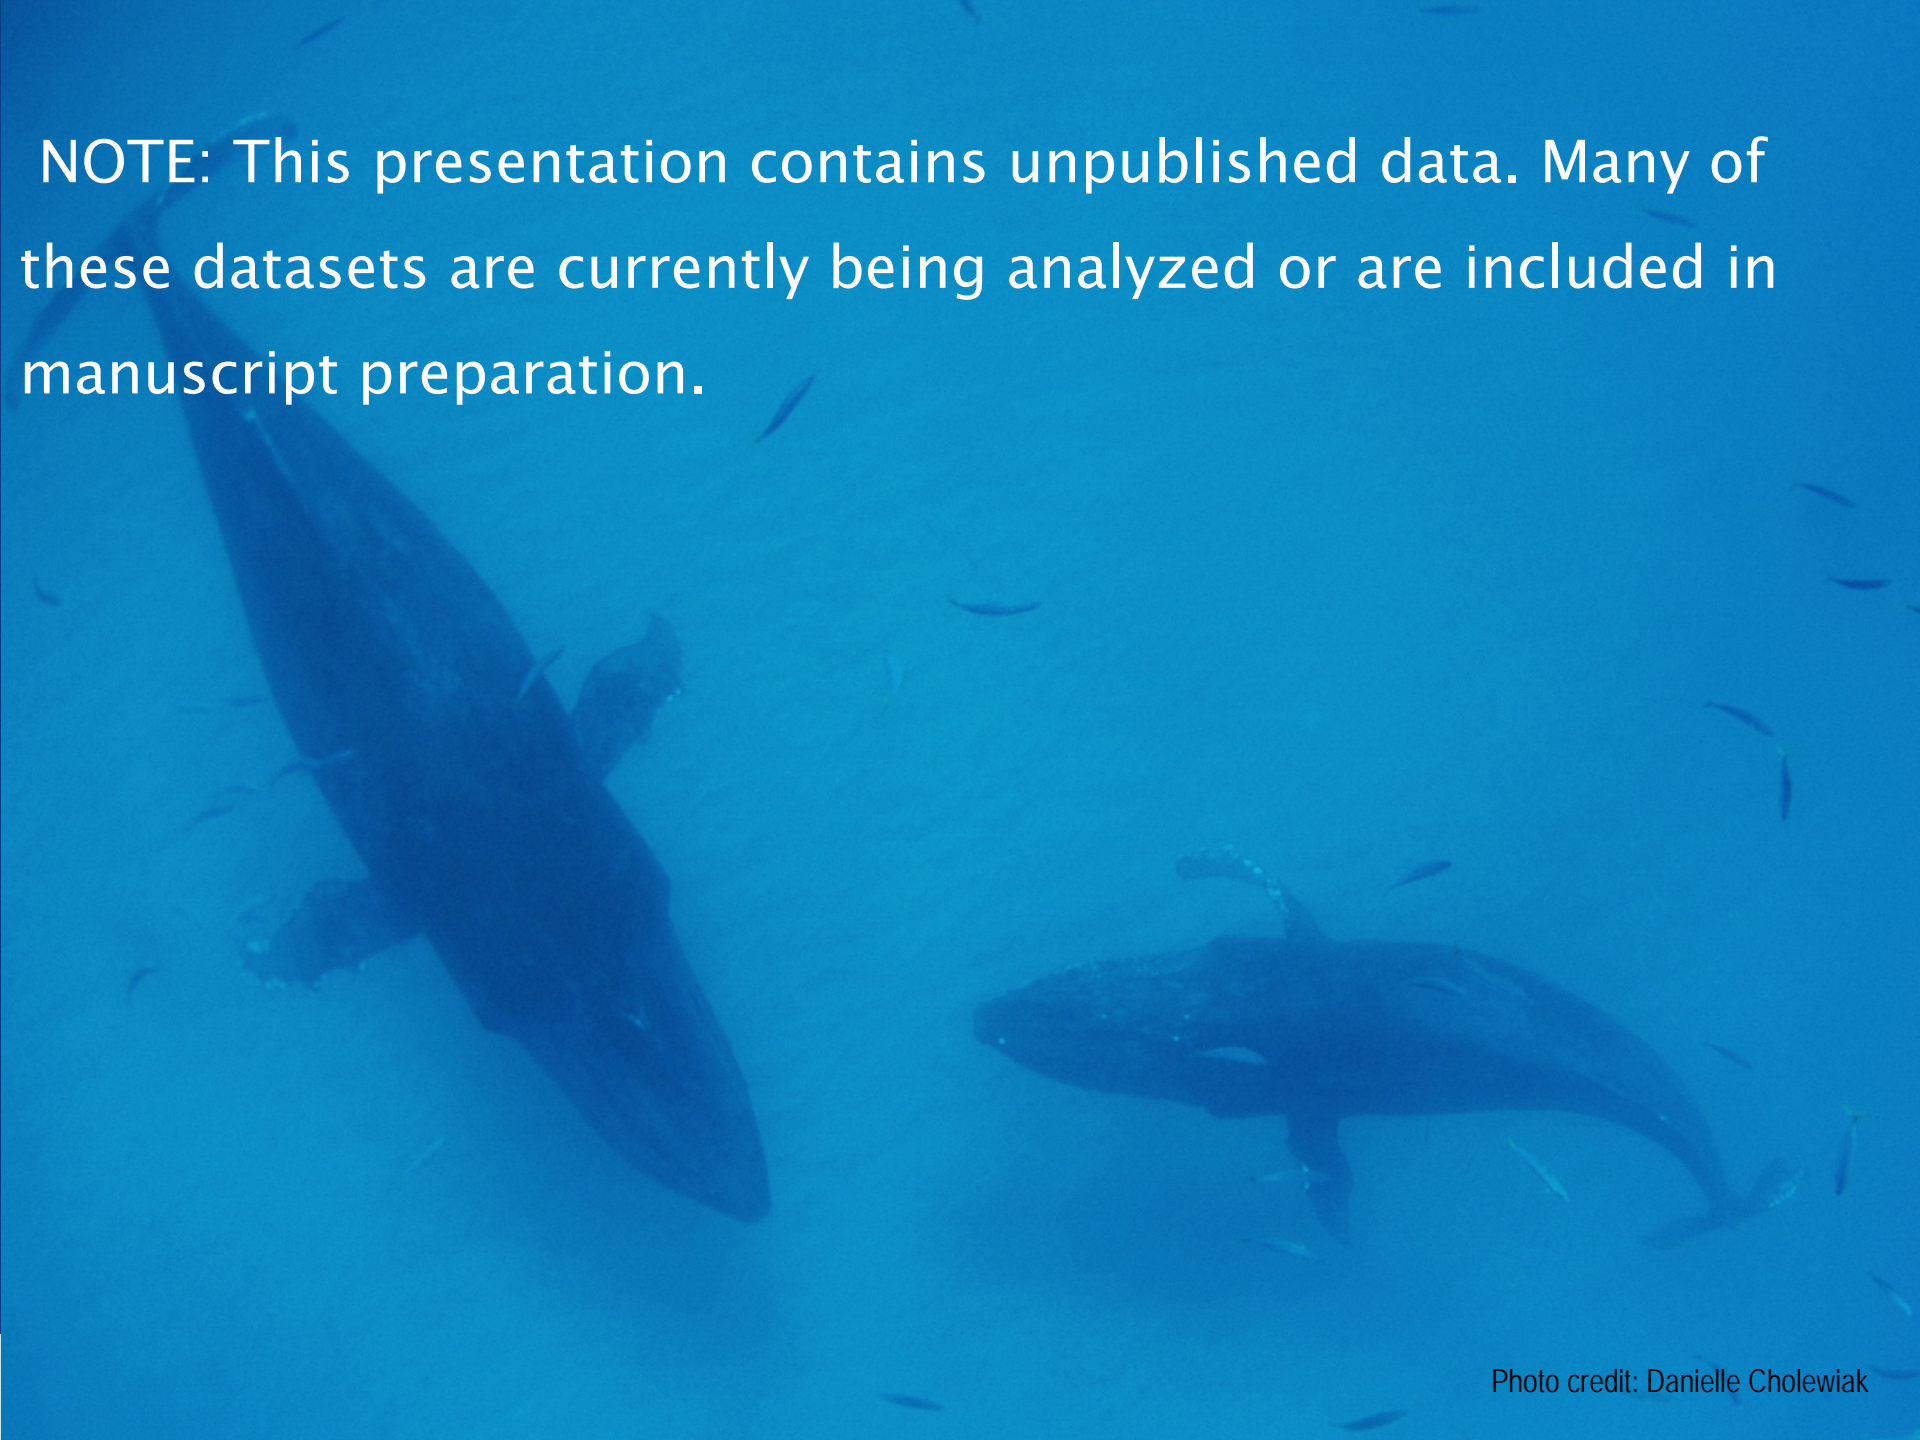

PROJECT			CONTRIBUTING NOAA PARTNERS			PARTNERS & STAKEHOLDER ENGAGEMENT			TRACKING & REPORTING		
Project Title & Description (paragraph)	Specific Activities (numbered bullets, roles per contributor)	Link to Strategy Goals (sentences)	Line Office(s)	Program(s)	Lead Contact(s) (name & email per program)	Federal Partners	Non-Federal Partners	Public Input or Targeted Stakeholder Engagement?	Expected Outcomes/Milestones & Timelines (within 2 yrs, sentences)	Progress 2018	Progress 2019
CROSS-LINE OFFICE FLAGSHIP PROJECTS											
NATIONAL ACTIVITIES											
REGIONAL ACTIVITIES											
SUB-REGIONAL ACTIVITIES											

- Offices /Programs identify actions they will commit to
- Within resources, capabilities, authorities, priorities of Offices or Programs
- Coordination, collaboration, integration across programs encouraged

Data Gaps & Future Needs

- Baseline acoustic information still needed for many species
- Few available technologies for long-term monitoring offshore environment limits our ability to monitor pelagic species
- More work needed to integrate presence-only acoustic data into tangible management strategies
- Continued support required to develop broad strategies to manage ocean noise and its impacts

NOTE: This presentation contains unpublished data. Many of these datasets are currently being analyzed or are included in manuscript preparation.
